RESEARCH STATEMENT

With the belief that ‘*Serious inquiry into human nature is not a luxury*,’ I study how personality traits and situational factors interact to shape human behavior, in particular, prosocial and moral behavior. I am currently applying this **person–situation interaction perspective** to the study of bystander intervention (i.e., how people remain prosocial when situations make it difficult to do so). I adopt rigorous empirical methods and am drawn to theoretical integration.

While psychology remains my ‘*Forever Moonlight*’ and intellectual foundation, I have interdisciplinary interests and pursuits. At present, I am actively bridging psychology with criminology, behavioral economics, and sociocultural perspectives. I am additionally interested in philosophy of science (meta-science) and computational social science. I see myself as a bridge and builder across disciplines.

Support good science – open, rigorous, and trustworthy science – always on the way.
